- no wonder this is used by professional window cleaners!
- no streaks

## HG window cleaner

HG "window cleaner" is a super concentrated product that cleans and degreases without streaks, but does not contain ammonia or spirits. No wonder professional window cleaners use this product. HG "window cleaner" exceeds every professional requirement – this HG product has a neutral pH, which means it is safe for paint, lacquer and plastic and very mild to the skin.

**Directions for use:** Use 15 ml (approx. 2-3 teaspoons) of HG "window cleaner" in half a bucket of lukewarm water (approx. 5 litres). Change the water more frequently for particularly dirty windows. Use undiluted HG "window cleaner" on very dirty spots. Apply an amount of HG "window cleaner" on a cloth or on the surface to be treated. Leave it for a little while and then wipe it off with a sponge or a damp cloth. Wash your windows with circular movements for the best results. Use overlapping strokes when you dry your window with a squeegee. Dry the squeegee with a dry cloth before using it again. Never clean your windows in direct sunlight.

**Attention:** Transport and store the bottle upright. Also suitable for outdoor use. Use HG "glass & mirror spray" on other glass and mirror surfaces. • Medical personnel can request the data sheet via +31 (0)36 54 94 777 • The consumer's information sheet can be obtained via [www.HG.eu](http://www.HG.eu)
