

HG extreme power cleaner (super remover) (HG product 20)

HG "extreme power cleaner" (super remover) is a professional, extremely powerful cleaner for the removal of truly stubborn staining and wax, polish and other protective layers on floor tiles, flagstones and all types of natural stone types that are extremely difficult to remove. Also suitable for use with a scrubbing machine.

Directions:

For intensive soiling:

Dissolve half a litre in half a bucket (5L) of lukewarm water and apply generously to the floor surface with a floor cloth or mop. Do not treat more than 10 to 15 m² at once. Then scrub the surface well with a scrubbing brush or stiff broom, leave to penetrate for a few minutes and then scrub well again. Then remove the solution from the surface with a mop, regularly rinsing the mop and wringing it out in water. (A water extractor can be used if required.) After that, thoroughly mop the floor again 2 times with clean water.

For extremely strong and stubborn soiling or to remove very old polish and other protective films:

Dissolve 1 litre in a bucket of 4 litres of lukewarm water and then following the above steps.

For use with a scrubbing machine: Dissolve half a litre in 5 litres of water, depending on the intensity of the soiling.

Coverage:

± 35-70 m² per litre.

Caution:

Be careful not to splash paintwork, wood, metal, carpeting, etc. Sectioning off the area of the surface being cleaned very carefully with masking tape. If a white haze remains on the floor after the treatment, this indicates that the solution has not been completely removed. This white haze can be removed by mopping again with clean water.
